

# Documentation

## Description

This API accepts a file containing a Swift message and extracts its fields, which are then stored in a SQLite database without using Entity Framework.

## Base URL

The base URL for all API requests is:

<https://localhost:7014/swagger/index.html>

## Endpoints

**POST /api/swiftmessages**

Returns a message which is telling us if everything is working properly or there is a error.

## Response

- In case of successfully uploading file it will return this message: "File '{ fileName}' uploaded successfully."
- In case of invalid data or missing file it will return this message: "No file uploaded."
- In case of an internal server error, the message will be: "Internal Server Error. Please try again later."

## Errors

This API uses the following error codes:

- 200 Ok.
- 400 Bad Request: The request was malformed or missing required parameters.
- 500 Internal Server Error: An unexpected error occurred on the server.
